

Central Service Building State Archive Demolition Sample Dust Control Procedures

Veit will be using the point of contact methods as depicted on the following slides AND a misting machine (not shown but similar to snowmaking machine) on the site.

The point of contact methods depicted on the slides are required to be in compliance with the “Wisconsin Department of Natural Resources Conservation Practice Standard Dust Control on Construction Sites (1068)”

Hand dust control targeted at the demolition activity.

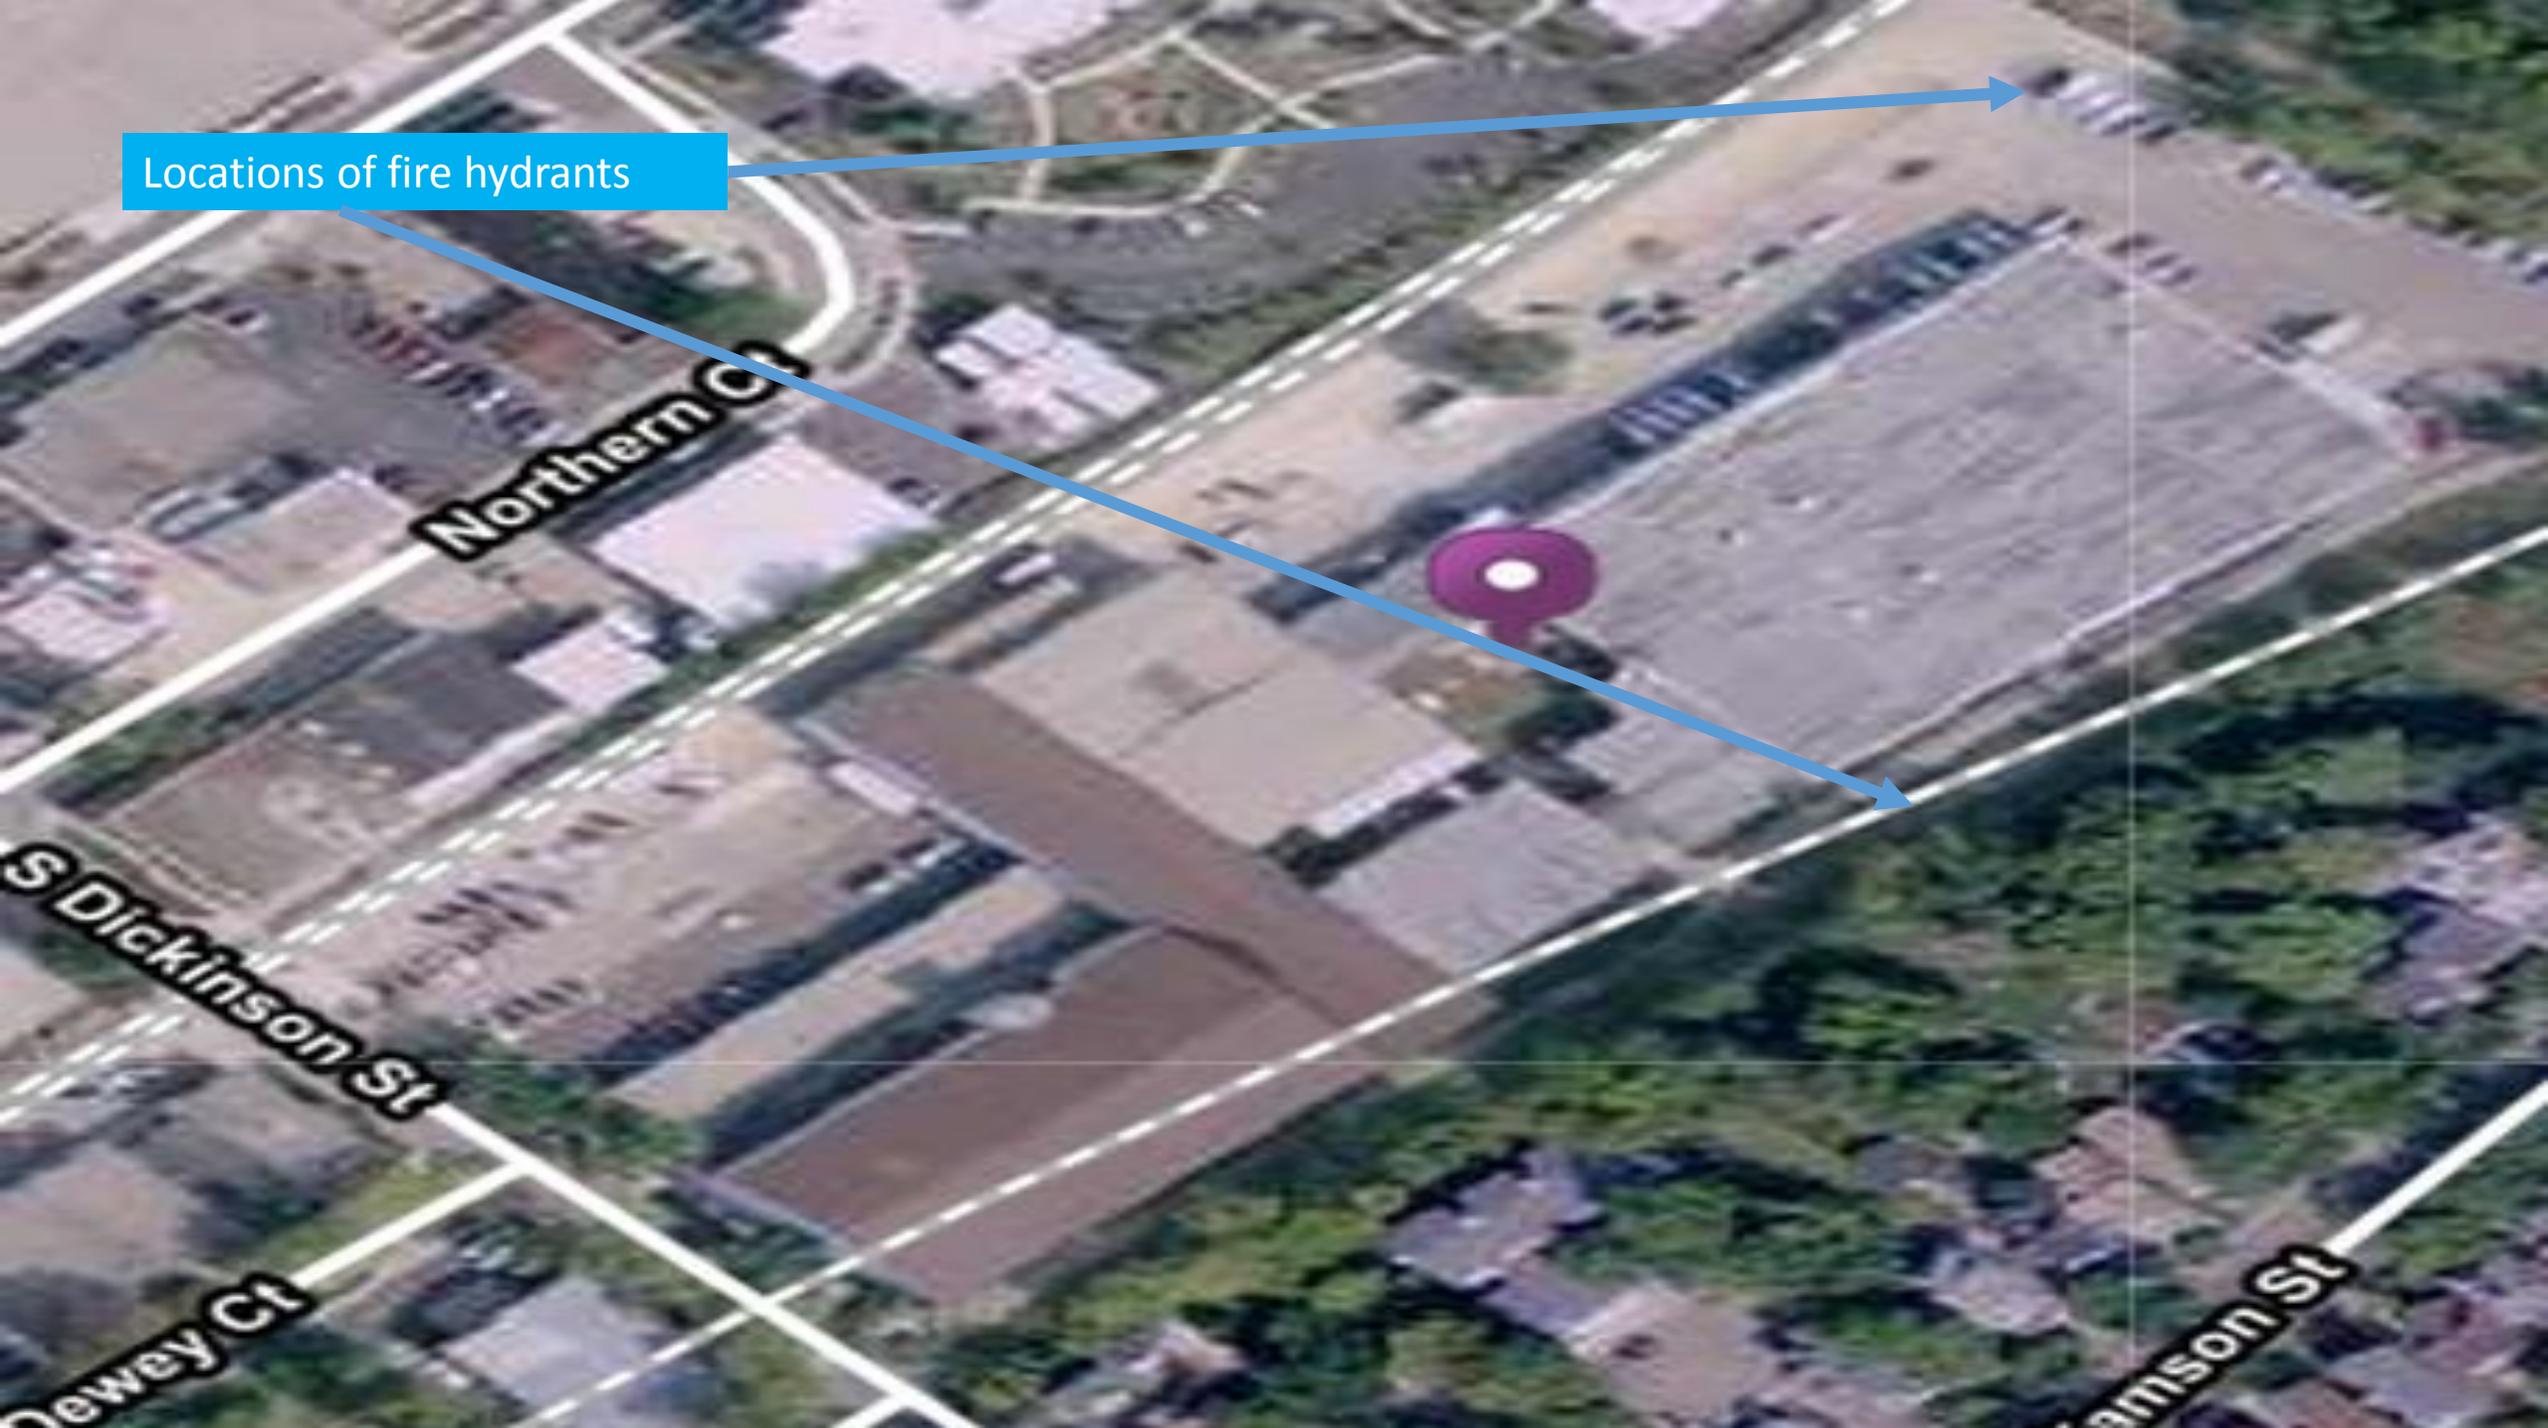

Dust control on equipment can be used to reach higher elevation by raising the bucket.

Water hoses supplied by city metered hydrants, located on the south and east side of the demolition site. Fire hoses with a fire nozzle shall be used for dust control.

Locations of fire hydrants
